

ACCESS CONTROL AND TIME & ATTENDANCE MANAGEMENT SOLUTION FOR A REPUTABLE GAMING COMPANY IN JORDAN

Industry
Video Game

Location
Jordan

Solution
Access Control
Time & Attendance

Client

Babil Games is a notable player in the video game industry, established in 2012 and later acquired in 2016 by the Swedish gaming conglomerate, Stillfront Group AB, which is listed on Nasdaq Stockholm's Main Market. The company, headquartered in Jordan, specializes in mobile gaming and is recognized for its commitment to crafting engaging and innovative gaming experiences.

Babil Games has made a significant impact with its diverse portfolio, spanning various genres and styles. The company's games are distinguished by their strong storytelling, creative design, and high-quality graphics, reflecting a dedication to delivering immersive experiences for a broad audience. As part of a growing wave of gaming companies in the Middle East, Babil Games contributes to the region's expanding influence in the global gaming landscape.

Project Requirements

Effective Access Control and Time & Attendance Management

Babil Games operates out of a dedicated 3-floor office building situated in the city center, reflecting its significant presence in the industry. The facility is equipped with advanced security measures, including high-access control and time attendance systems installed at each entrance. These systems are crucial for maintaining security and accurately tracking employee attendance. With a workforce ranging from approximately 50 to 200 employees, these measures help ensure both the safety of the premises and the efficient management of staff records.

Convenient Time Management System with Flexibility and Compatibility

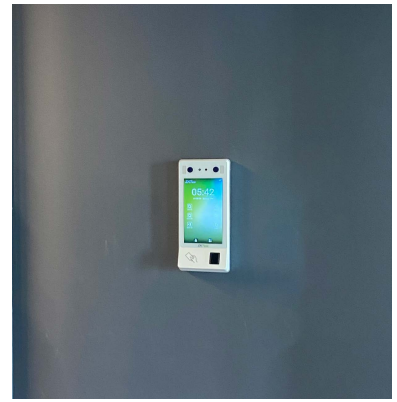

The client needs a solution with access control and time & attendance management both in one software that fully compatible with the access control and time & attendance terminals.

Solution Details

G4 Pro – Ultimate Security Efficiency with Cost Effectiveness

The solution has been installed at two key doors in the building, utilizing the advanced G4 Pro system. This device is equipped with the Android 9.0 operating system and includes several upgraded features such as Power over Ethernet (PoE) for streamlined power management and full compatibility with 4G networks. The G4 Pro is specially designed to improve accessibility efficiency within the premises, offering enhanced functionality and seamless integration for managing entry and tracking within the facility.

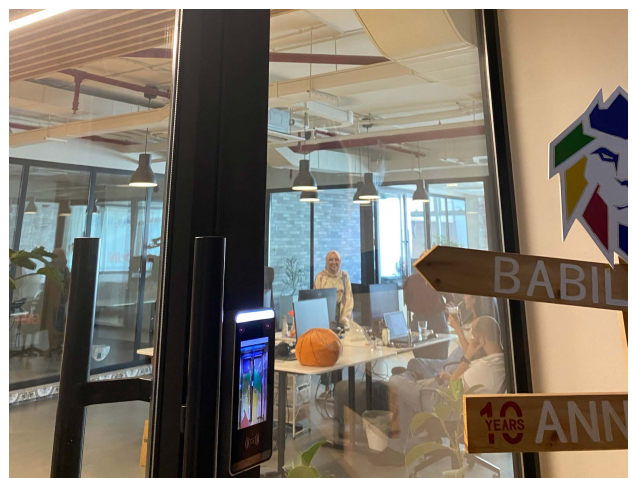

Precise and Quick Identity Authentication with SpeedFace-V5L

The SpeedFace-V5L devices, installed at two doors in the building, are used to efficiently manage and record employee access and time & attendance. These devices use advanced facial recognition technology and intelligent algorithms to quickly and accurately identify individuals. They support multiple authentication methods, including fingerprint, facial and palm authentications. Additionally, the SpeedFace-V5L can read QR codes through a mobile app, adding an extra layer of security and versatility. This combination of features ensures smooth and secure access control for the premises.

Web-Based Multi-Location Centralized Time Management with BioTime 8.5 Software

BioTime 8.5 is a web-based time management platform used to oversee access control and attendance records across multiple locations. It seamlessly integrates with installed devices, allowing for centralized management of employee access and time logs. The software supports stable communication with thousands of devices, which can be remotely managed via a web browser. Enhanced features include timetable management, shift scheduling, and detailed attendance reports, making BioTime 8.5 a powerful tool for comprehensive time and attendance management.
