

ZKTeco Parking Management for N. H. PROSPERITY COMPANY LIMITED in Thailand

Industry

Logistics

Location

Thailand

Solution

Parking Management

Requirements

Customer requirements are to collect data on delivery trucks entering the area for cargo pickup and to automatically control the barrier gate. The system must support automatic gate opening while allowing the configuration of authorized and unauthorized vehicle license plates for access permission to the site.

Solution

When a registered delivery vehicle enters the area, the license plate recognition camera reads and identifies the vehicle and records the entry time. Authorized registered vehicles are granted automatic barrier gate access. Once the vehicle has passed through the detection zone, the VR10Pro radar automatically triggers the barrier arm to close.

Configuration

System	Type	Model
Parking Management	Parking Barrier	BGM500
	Radar	VR10Pro
	Mini LPR Set	LPRC500
	Software	ZKParking
