About Client

Green Valley Lodge is a guest house situated near the Wonderboom South Nature Reserve in Pretoria, South Africa. Seeking to enhance its workforce management efficiency, the lodge required a modern and reliable biometric time and attendance solution to replace manual methods and ensure accurate employee records.

Requirement

The client specifically requested a biometric system that would operate solely using fingerprint recognition and be installed inside the facility's storeroom for convenient access and use biometrics.

Solution

To meet these requirements, Supertime identified the ZKTeco SF100 biometric terminal as the most suitable device for the project. After gaining the client's approval, all employee data was enrolled in the system, and comprehensive testing was conducted to confirm the accuracy and reliability of the fingerprint-based clocking process. The Supertime team also provided training for the lodge's administrative users to ensure smooth operation and proper data management.

The Green Valley Lodge management and staff expressed high satisfaction with the installation quality, the user-friendly interface of the SF100 device, and its efficient, fingerprint-only attendance tracking. The solution successfully delivered a streamlined, secure, and paperless time management process for the client.
