

Hdfc Bank's Regional Office Gets Smart Entrance Control Management in India

Industry

Finance

Location

Kolkata, India

Solution

Entrance Control

About Client

HDFC Bank is one of India's leading private sector banks, known for its strong financial performance, customer-centric approach and technological innovation. With a widespread national presence and a reputation for trust and reliability, the bank offers a comprehensive range of banking and financial services to individuals, businesses and institutions across the country.

Challenge

The Kolkata Regional Office of HDFC Bank handles high volumes of daily operations with employees from various departments. Prior to implementation, the office lacked an automated mechanism to regulate employee entry and exit, posing both security and operational challenges. Additionally, there was a growing need to enforce limited access to specific areas depending on departmental roles. The existing manual methods, including security guard monitoring, were insufficient and lacked accurate and continuous monitoring. This raised concerns about unauthorized access and the overall effectiveness of the existing security framework.

Requirements

- Regulate Employee Entry and Exit
- Enforce Limited Access to Specific Areas
- Card-Based Entry Access for Employees
- Reduce Dependency on Security Guard Checks

Solution

As per the requirements, a secure Card-based Entrance Control System was implemented at HDFC Bank's Kolkata Regional Office to efficiently manage and monitor employee access. This system enables controlled, role-based access to specific areas within the premises, enhances operational flow and minimizes reliance on manual security checks.

Configuration

System	Type	Model
Entrance Control	Single-lane & Dual-lane Swing Barriers	SBTL700
		SBTL720

V1.0 30/12/2025
